

Can you fit your body through a piece of paper?

- 1. Fold the paper in half lengthwise so that you can see the marks.**
- 2. Cut on the black line at each end. You will leave the two ends intact (Don't cut through the fold)**
- 3. Now, start on the second line in, and alternate cutting on the lines until you have cut them all. In other words, turn the open edge toward you and cut the next line. Don't cut any further than the line goes. Then turn the folded edge toward you and cut the next line. Continue this alternating until you have completed all the cuts.**
- 4. This is important!!! Don't cut the fold on either end. Starting on the next line that is on the fold, cut through the fold, or loop. Continue to do that for every loop EXCEPT the ones on the ends.**
- 5. Open your paper and gently stretch it**
- 6. Can you fit your body through the hole you created?**
